Reliable solution designed with people in focus

According to the World Report on Disability, millions and millions of people around the world are living with some form of physical disability. This makes them the world's largest minority group. Yet their needs are frequently overlooked in schools, hospitals, and other public spaces. This is because restroom facilities are often inaccessible or inadequate.

Dignity

For people with physical or mental difficulties, a simple trip may be impossible – or humiliating and undignified – because the restroom facilities fail to accommodate their needs.

Due to the lack of facilities and assistive equipment in restrooms, many intentionally stop consuming fluids before leaving home to avoid inadequate public bathrooms. Others are forced to lie down on unhygienic restroom floors or in the back of their

cars for care or changing. This is why accessible bathrooms with shower and changing tables are essential in all public places.

Reliable safety for users and caregivers

Optimal working conditions are vital for providing care to people living with disabilities. Caregivers and family members are often subjected to dangerous working conditions when providing care in a facility not properly equipped to meet their needs. This can cause back, shoulder, and other injuries, putting the safety of the user and caregiver at risk.

Pressalit height-adjustable shower and changing tables ensure optimal working conditions for caregivers and family members. Safety rails provide privacy and comfort for the care receiver. The height adjustable feature makes lifting to and from the table easier and helps to avoid uncomfortable and dangerous working positions.

Easy to Clean

Maintaining excellent hygiene in bathrooms require fixtures that are quick and easy to clean. Pressalit shower and changing tables are designed and built with a strong focus on healthy living. This makes the shower and changing tables ideal for use in public institutions such as hospitals and schools.

Flexibility and quality

The right bathroom facilities contribute to an increased sense of independence for people with physical disabilities. The higher degree of self-reliance also improves the user's overall quality of life.

Pressalit offers a lot of features to adapt shower and changing tables to match a given space and meet individual user needs. All Pressalit shower and changing tables come with a 3-year guarantee – our assurance of a stable durable, and high quality solution.

” Technology like this not only improves quality of life for users – it also contributes to a healthier working environment for family and caregivers”

Holger S e Plougsgaard, Head of Product Development at Pressalit

PITTSBURGH INTERNATIONAL AIRPORT Becomes all accessible

In a first for airports around the world, Pittsburgh International Airport has introduced a dedicated facility to help reduce stress for travelers with sensory sensitivity. Here, those with autism or similar issues and their families can de-escalate and relax prior to take-off and after landing.

The Pittsburgh International Airport chose Pressalit products to improve accessibility in the terminal's family restroom. They have installed a Pressalit height-adjustable sink and height-adjustable adult-sized changing table. This makes it easier for families to travel comfortably, regardless of physical or mental ability.

” It is so important to make sure that I am not injuring my family members or my husband when they are trying to make sure that my needs are taken care of. The safety of both me and the care provider is vital and that is one reason the height adjustable tables are so important.”

Dr. Josie Badger, diagnosed with congenital myasthenic syndrome

Facilities to meet the needs of the community

Nothing was left to chance when the Pittsburgh International Airport began the process of making the airport more accessible. This was a strong commitment to establish facilities that meet the needs of the entire community. The airport consulted with advocacy groups, caregivers of children with neurodevelopmental challenges, and other experts to form a winning plan.

This consultative process collected experiences and suggestions for the design of the sensory room and the family restroom. It became clear that one of the most important items for users is the availability of an adult-sized changing table – and that it is height-adjustable. This improves the safety of use and eases the transfer from wheelchair to changing table. Travelers with disabilities would now have the dignity and privacy they need when visiting the airport.

A better travel experience

Many families impacted by a disability do not fly long distance – in fact many do not fly at all. One reason for this is the lack of accessible facilities in family restrooms. The installation of a Pressalit adult-sized changing table and height-adjustable sink is a major step to improve restroom accessibility. The impact is substantial. More people than expected use the changing table and the height-adjustable sink. This improves the airport experience for visitors. Travelers have less stress and are more comfortable. This makes the flight more relaxing for everyone.
