Protac SenSit[®]
Nature

Sensory-stimulating ball chair for all ages

Protac SenSit[®] is a ball chair for children and adults with mental and physical disorders. The balls stimulate the muscle-and-joint sense and the sense of touch through deep and dynamic pressure, promoting an improved body awareness and a calming feeling for body and mind.

We recommend the high back model for users over 180 cm for optimal comfort.

The chair can
be cleaned with
disinfecting wipes
and the cover is
washable

A sensory-
stimulating
alternative for
wheelchair
users

For outdoor rehabilitation

The Nature-chair is a safe and well-known base outside and can help to organize the many sensory input from the nature. It is among other places used in sensory-gardens and school yards.

The chair is produced in a durable, waterproof and windproof material and has taped seams and zippers. The chair can also be used indoors and is particularly relevant where strict hygienic requirements are necessary or for users with incontinence problems.

Colour availability:

Protac SenSit® Straight

Model with extra stability

The Straight-chair has a foam core, which makes the chair stable. The backrest is straight, and the seating position is similar to an ordinary recliner. This makes the chair particularly relevant for users who find it difficult to sit down and stand up on their own.

Colour availability:

Protac SenSit® Puff

A footstool or an extra seat

The puff is a footstool with balls on the top and granulate filling in the bottom. It both functions as a footstool and as an extra seat. We recommend that the Protac SenSit® is always used with the puff for optimal comfort.

Besides, the puff is very useful for teachers, care takers and therapists as it makes it easy for them to sit next to the user of the ball chair and at eye level - opening up for close and calm conversations.

Colour availability:

Protac SenSit® Frame

User friendly frame

Protac SenSit® Frame is a frame with handles and an inclined bottom giving the Protac SenSit® chair several user-friendly features. The handles makes it easier for the user to enter and get up from the chair and the inclined bottom makes the seating position in the chair higher and more comfortable for persons with functional disabilities. The two wheels in the back make it possible to tilt and easily move the chair.

Protac SenSit® Frame provides a possibility to benefit from the sensory-stimulating effect from the ball chair to all users despite physical impairments.
