

Introducing the Protac SenSit® Junior

The Comfort and Sensory Benefits of the SenSit® – Now Designed for Children!

The Protac SenSit® Junior is designed for children ages 3-10, offering the same deep pressure stimulation and comforting design as the original—now in a child-friendly size. The smaller design allows children to sit down, get up, and adjust the sensory wings independently, fostering independence and promoting self-regulation.

Who Benefits from the Protac SenSit® Junior?

Children with sensory processing challenges, ADHD, autism, or anxiety can find comfort in the Protac SenSit® Junior. The chair stimulates the proprioceptive sense and deep touch receptors through dynamic pressure, helping children feel secure and relaxed.

The movement of the balls provide targeted point pressure, promoting relaxation and body awareness.

20% smaller than the original SenSit®.
Designed for children ages 3-10.

- 20% Smaller than the original Protac SenSit® – Perfectly sized for children.
- Same proven design – Features the signature ball-filled seat, back, and four unique sensory-stimulating wings.
- Durable and easy to maintain – Available in Standard or Nature (waterproof) versions to fit different needs and environments.
- Lightweight and portable – Weighs just 11.5 kg (with Puff: 13 kg), making it easy to move and adapt to different spaces.
- Available in Aqua, Grey, Navy (Nature version) and Khaki (Nature version).
- Sold with or without the puff (footrest).
